1 Installing QPR ProcessXpress

This document guides you through installing the standalone package of QPR ProcessXpress. The installation requires that you have at least version 2.0 of the Windows Installer engine (which can be obtained through Windows Update).

1.1 Requirements

Installing and using QPR ProcessXpress has the following requirements.

- **Operating System:**
 - Windows XP
 - Windows Vista
 - Windows 7
- **Administrator rights for installation**
- **At least 1GHz Pentium III (or equivalent) with 512MB of RAM**
- **100MB of free disk space for installation (more disk space is needed for model cache during modeling)**

1.2 Basic Installation

Follow the instructions below to install a basic installation of QPR ProcessXpress 2012.1:

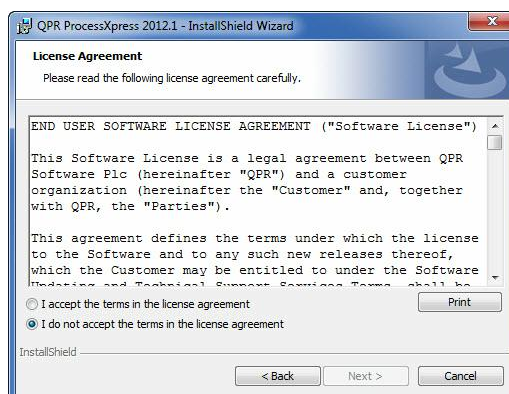

1. Welcome Page

This is the starting point of the QPR ProcessXpress 2012.1 Xpress installation. Click **Next** to continue.

2. License Agreement

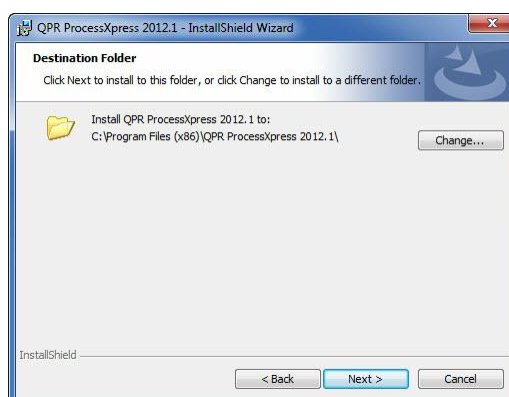

Here you can see the End User Software License terms for the software that is about to be installed. You will need to accept these terms before continuing the installation. Select "I accept the terms in the license agreement" and click **Next** to continue in the case you accept the license terms. Otherwise you'll need to cancel the installation.

3. Select Destination Folder

Define the folder where QPR ProcessXpress 2012.1 will be installed. By default the folder is C:\Program Files\QPR Software Plc\QPR ProcessXpress 2012.1.

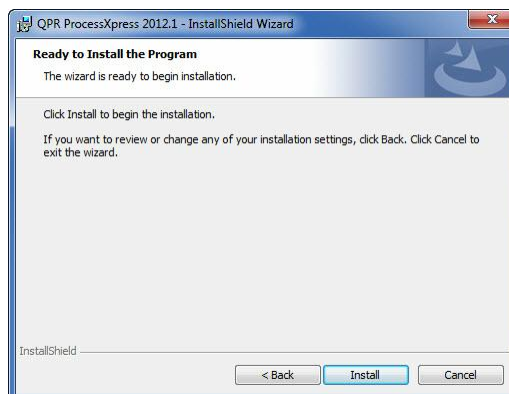

Click **Next** to continue.

4. Ready to Install

The installer is now ready to start copying the application files to the computer. If you need to change any settings, click Back and make the necessary changes.

Once you are satisfied with the settings, click **Install** to start the installation.

5. Installation Complete

The installation is now complete, and you can start using QPR ProcessXpress. If you want to see the installation log file, select the "Show the Windows Installer log" checkbox. Click **Finish** to exit the installer.

1.3 Activating QPR ProcessXpress

When QPR ProcessXpress is started for the first time, QPR Activation Utility is launched. Note that you can evaluate QPR ProcessXpress for 14 days prior to purchase. After the evaluation period is expired, you need to acquire a full license for QPR ProcessXpress. Follow the instructions below to activate the 14-day evaluation or the full license.

1. In the welcome page you can select the activation method and need to input your customer information. You can also view your current activation status by clicking the **Activation Status** button at the bottom left corner. If you don't have a customer code yet, you can choose the 14-day evaluation activation provided that you haven't already used the evaluation period. In the case you select to activate using your customer code, input the code into the corresponding field. If you have forgotten your customer code or your 14-day evaluation period has expired, click the "Forgot your Customer code? Evaluation period expired?" link. Fill in also your user information to the section reserved for it. Note that you need to fill in at least all the fields marked with an asterisk (*). In addition, use only Western characters in the form. After filling in the required information, click **Next** to continue. The information you provided is sent to QPR during the activation.
2. The License Agreement is displayed. After reading the license agreement, tick the "I accept the licensing terms" checkbox and click the **Next** button to continue.
3. Define the activation method. You can choose to activate the software Automatically via Web or manually via E-mail. You can use a Proxy Server during the automatic activation by clicking the **Proxy Settings** button, selecting the "Use proxy server to connect to QPR product activation server" check box, and defining the address and port of the proxy server. After selecting the method, click **Activate** (or **Next**, if you selected manual activation via E-mail). In the case you selected automatic activation via web, the product is now activated automatically. In the case you selected manually via E-mail, you need to send the displayed Activation Code to QPR Customer Care. After receiving the Activation Message from QPR Customer Care, click **Next** to continue and input the message into the **Activation Message** section. Then, click **Next** to continue.
4. As the final stage, your new activation status is displayed. Please check that the information is correct and click **Finish** to close the QPR Activation Utility.

1.4 Silent Installation

To run QPR ProcessXpress installation silently, open the command prompt to the folder containing the QPRProcessXpress20121Setup.exe package and start the installation with the following command: **QPRProcessXpress20121Setup.exe /s /v"/qn INSTALLDIR=\"<path where QPR ProcessXpress should be installed>\""**

Once the QPR ProcessXpress icon has appeared on the desktop and the msixec process is not running (see the Task Manager) anymore, you can start using the software. Note that the INSTALLDIR property needs to be defined and its value should be a path where QPR ProcessXpress gets installed, e.g. C:\Program Files\QPR ProcessXpress 2012.1.

1.5 Migrating to a New Version

In a migration, the new version is installed side-by-side with an existing version of QPR ProcessGuide Xpress and you can proceed with the new version's installation similarly as if it were a first-time installation of QPR ProcessXpress. The default installation folders are designed not to overlap, but if you have used a custom installation folder, make sure you're not installing the new version into the same folder with the old one. Note that once you save your models with the new version, you cannot open them in the old version anymore. When you have taken the new version into use and are satisfied with it, you can remove the old version using the Windows Control Panel.

Note: Make sure you have full backups of your models before proceeding with the migration!
