1 Overview

Metrics Designer for OPR Portal enables some of Metrics Designer Clients features in OPR Portal. These are create, modify and delete single measures, and mass edit measures. Metrics Designer for QPR Portal is implemented using portal template customizations.

2 Compatibility

Compatible with QPR 2015.1.

3 Create, modify and delete measures (Navigator and Analysis tabs)

Functionality:

- New buttons **Create measure**, **Modify measure** and **Delete measure** in the details pane.
- When a top element is selected, there is **Delete Scorecard** button instead of Delete measure button. (It's not possible to delete top element without deleting whole scorecard).
- Changing element type is not possible in QPR Web Service, which is why it's disabled when editing existing measures.

4 Mass edit measures (Analysis tab)

Mass edit makes it possible to change settings of multiple elements in a same view. Click **Configure** Measures to switch table to editable mode. Click Save measure settings or Cancel configuration to save modified settings or cancel operation. It's possible to modify measure's

- name
- symbol
- description
- value setting _
- period level
- graph template.

Click **Apply to all** icon to copy a setting value to all measures in the view.

Measure unit and periodic accumulation are currently not available. In addition, it's not possible to change series specific information (series measure unit, series periodic accumulation, series input type, series label).

5 Installation

- 1. Apply the template changes in **Metrics Designer for QPR Portal.patch** to **C:\ProgramData\QPR** Software\QPR 2015\2015.1\Servers\Templates\WAS\, or use WAS.zip which contains all templates where changes have been applied.
- 2. Copy measuremodificationview.tpl to C:\ProgramData\QPR Software\QPR 2015\2015.1\Servers\Templates\WAS\Portal.
- 3. Copy copy icon.png to C:\inetpub\wwwroot\gpr2015-1\gprsoftware\portal\images.
- 4. Clear OPR Portal template cache.

6 Customize measure edit form

The create/modify measures form can be customized using following javascript variables in measuremodificationview.tpl.

HIDE SYMBOL determines if symbol field is shown (alternatives true or false).

FIXED_NAME, FIXED_TYPENAME, FIXED_DESCRIPTION, FIXED_MEASUREUNITID, FIXED VALUESETTINGSID, FIXED ACCUMULATIONRULE, FIXED PERIODLEVELID, FIXED_GRAPHLAYOUTTEMPLATEID can be

- null, -
- empty string (i.e. "") (only FIXED_DESCRIPTION can have this value) -
- contain a value. (e.g. "some value")

Null means that the corresponding field is visible and users can input a value. Non null value means that this defined value is used instead of user input, and so the corresponding field is not visible at all.

Example 1. If all measures should have period level (e.g.) month, you can set var FIXED_PERIODLEVELID = "SC.1938773693.44314"; meaning that Period level field is not visible and it is set to SC.1938773693.44314 (corresponding object id).

Example 2. If description should be empty, you can set var FIXED_DESCRIPTION = ""; meaning that Description field is not visible and it is set empty.
