

View Quick Selector for Action Analysis

Version 2.0.0 (27.6.2015)

Contents

1 Overview	1
2 Compatibility	1
3 Installation.....	1
4 Example	2

1 Overview

View Quick Selector for Action Analysis improves QPR Portal usability in Action Analysis tab by showing available portal views in the left side frame, where views can be changed more quickly. With it there is no need to use the Views button. The views are shown in the *custom order*, which can be set in the Settings menu. Selected view is always highlighted.

2 Compatibility

Compatible with QPR 2015.1.

3 Installation

Installation steps:

1. Install **inetpub.patch** to **C:\inetpub\wwwroot\qpr2015-1\qprsoftware** (or use the changed **actionanalysisview.js**). (more information for changing templates: <https://community.qpr.com/node/1681>)
2. Install **WAS.patch** to C:\ProgramData\QPR Software\QPR 2015\2015.1\Servers\Templates\WAS (or use the changed **actionanalysisframeview.tpl** and **actionanalysishierarchytreeview.tpl**).
3. Clear portal template cache and web browser's cache.

4 Example

The screenshot displays the QPR software interface. At the top, there is a navigation bar with tabs for 'My Contents', 'Processes', 'Scorecards', 'Actions', 'Reports', and 'Workflows'. Below this, there are filters for 'Discussion', 'By User', and 'By Time', and a search bar. The main content area is titled 'Action analysis view' and shows a table of analysis results. A 'Select View' dialog box is overlaid on the table, allowing the user to choose between 'Alphabetical order' and 'Custom order' for their view settings. The dialog box also shows a list of 'Shared Views' and 'My Views'.
