The PDF Printer add-on enables printing briefing booklets in QPR Portal as PDF documents.

When the PDF Printer add-on is installed, the Booklet mode and Pages only printing options or briefing booklets are not available. Instead, there is a Print to PDF button which opens a dialog for choosing the page orientation, and after selection creates a PDF document out of the selected briefing booklet.

To get the printer into use in a non-service installation, copy the files in the Add-Ons\QPR PDF Printer folder into <QPR Suite 2015.1 installation root>\Utilities folder and restart QPR Web Application Server. Note that you need administrator access for copying the files.

To get the printer into use in a QPR service installation:
1. Back up your system registry!
2. Make sure that a default printer is installed on the system under the current account.
3. Copy the files in the Add-Ons\QPR PDF Printer folder into <QPR Suite 2015.1 installation root> \Utilities folder.
4. Set up a printer for the system account by following the instructions on http://support.microsoft.com/kb/184291/en-us?fr=1 or run QPR.PDFPrinter.exe as an Administrator.

Warning	Modifying the registry incorrectly can cause serious, system-wide problems that may require you to reinstall Windows to correct them.

Note	If you execute the service as some other user than system account, you do not need to modify the registry for the PDF printer to work.

5. Restart QPR service.
